</table>
It was May 4, 1993. Together with my mentor Professor İhsan Doğramacı, we went to the Gülhane Military Medical Academy Hospital to accompany Minister İsmet Sezgin during his surgery. The operation went on smoothly, without any complications. Afterwords, Professor Doğramacı and I started talking about current health issues in the country and possible solutions when suddenly he said: “Why don’t you establish a new university?”

His comment caught me by surprise. The idea of establishing a new university had been on my mind for a long time, and I had started working on the project. I told Professor Doğramacı that the paperwork had almost been done and completed. I was ready to submit the file for application. As we were walking to his car, he said: “Let’s go to my office.”

We went to Professor Doğramacı’s office in the Bilkent University Library. He immediately summoned the University’s legal adviser and asked her to prepare the documents needed for the establishment of a foundation university. Then he turned to me and asked another question: “What is the name going to be?” When I told him that I hadn’t thought of a name yet, he suggested the name “Haberal”. I remember responding to it without hesitation: “Sir, why doesn’t Bilkent University bear the name ‘Doğramacı’?” Without waiting for his answer, I added: “Whatever name you see fit will be the name of my university.” Professor Doğramacı thought for a while and then said: “Then, it is ‘Başkent’.”

As a surgeon, as a man of science, and as a citizen of the Turkish Republic, it is my primary duty to express my gratitude to Professor Doğramacı and honour the memory of this great man, not only because, by establishing Hacettepe University back in 1967, he had accomplished a significant breakthrough in the field of medicine in Turkey and, by establishing Bilkent University in 1986, led the path for the foundation universities in the country, but also because he gave Başkent University its name and, more importantly, contributed greatly to the recognition of our country in international platforms.
From The President

Prof. Dr. Mehmet Haberal, the Founder, Founder President and President of the Executive Supreme Board, founded Başkent University with great mastery of his personal vision in a process full of sacrifices and difficulties for nearly 30 years to meet the need of our country’s qualified higher education institutions. The journey that started with Turkey Transplant and Burn Treatment Foundation in 1980 and went on through the establishment of the first dialysis center in March 12, 1982. After the foundation of the first hospital on September 16, 1985, Prof. Dr. Mehmet Haberal established Haberal Educational Foundation and formed the ground of the foundation of Başkent University in 1993. From its foundation to today, he launched a great system to provide services to our university, its affiliates, the country and the nation.

Our university, which aims to educate individuals who stand bound to Atatürk’s principles, embrace science as their guide, have a national consciousness, possess an inquisitive, productive, analyzing and integrative frame of mind, are creative and innovative, and respect human rights and nature, is an organizational structure where approximately 15,000 students take education and more than 10,000 employees serve. Today, Başkent University, with its 11 Faculties, State Conservatory, 7 Institutes, 7 Vocational Schools, 1 School of Foreign Languages, 2 Colleges, 2 Practice Hotels, a televisi-on channel and radio having a global broadcasting quality, its orchestra, its health institutions that provide the most widespread service and have the largest number of patients after The Ministry of Health, provide service with the principle of 7 days and 24 hours of our Founder, Founder President and President of the Executive Supreme Board Prof. Dr. Mehmet Haberal who made his country reach a level that may compete academically in every ground.

We have distinct and distinctive competencies that differentiate our university from other universities in our country. As a matter of great importance to the Founder President of the University and the President of the Executive Supreme Board Prof. Dr. Mehmet Haberal, the medium of instruction at our university is Turkish, yet foreign language is a benchmark and each graduate is made to reach a level where they can make use of English proficient enough regarding their own professions. In our university where an integrated education is provided starting from nursery school to doctorate education, all services are carried out by our own units apart from banking and transportation services.

Our students who are aimed to acquire skills and are learning by doing and living, can learn more than one foreign language, take art lessons, increase their self-confidence through student centered applications and have the privilege of taking courses from nearly 1,500 lecturers who have the highest international publication capacity. In addition to having the opportunity to enroll in double major and minor programs, special applications are being made to run a part of their studies abroad and joint programs are being conducted with foreign universities. With all these qualities, Başkent University is the first university that binds to and maintained by ISO quality assurance certificate in Turkey.

Our university contributes to the improvement of the technological, socio-economic and cultural level of the Turkish society by improving the quality of human health and the proliferation of the community services by leading the way in quality by its systematic improvement system. All the material and spiritual resources of our university are being used in this way by creating the most advanced problem-solving capacities in health, education and communication issues that are the primary problem areas of our country.

Together with education and research activities, all the academics, employees and students, who carry out their work under the guidance of our Founder President and the President of the Executive Supreme Board Prof. Dr. Mehmet Haberal, keep their efforts to protect and raise the level of “Internationally recognized and competitive university” through the understanding of “Başkent Family”.

STATE CONSERVATORY

The technical knowledge and skills given in our programs, intellectual accumulation teach to master. Educational programs are only tools for reaching the artist’s freedom. What we need to do is to prepare the necessary and sufficient environment for the development of artists who freely create, freely think and freely realize themselves. Our conservatory is organized to educate creative artists who have attained the highest level of technical competence in their field and who are constantly renewing themselves, researching and critical thinking by following the changes in our country and in the world.

Our programs give students the necessary technical and intellectual information in a simple, advanced and sharing manner. The nature of art encourages students to develop their sensuality, sensitivity and intellectual aspects in a free environment. Our departments prepare the necessary environment for the realization of all kinds of artistic and intellectual activities. There are two departments; Department of Music and Department of Performing Arts. Our students in our departments are educated as composers, music theorists and stage soloists as well as chorus artist or master vocals of popular music by the staff of our university and the teachers of our country from the artists who are assigned to teach from important art institutions. Through the education provided at the undergraduate and graduate levels, our students can become artists for orchestras, operas and other professional art groups as well as continuing their composition studies and working as instructors in music schools. In our education, the focus is to improve the creativity and high interpretive skills of our students.

Another organization involved in our conservatory is the Orchestra Academic Başkent. Orchestra Academic Başkent, having a stringed chamber orchestra, is an orchestra based on professional artists. It is welcomed with four concerts both in Turkey and abroad with monthly periodical concerts in our university hall and concerts with many important Turkish and foreign orchestra conductors and soloists.

Our conservatory, with its educational philosophy and afore-mentioned organizational structure, continue to work sincerely in the name of art.

ORCHESTRA ACADEMIC BAŞKENT

Orchestra Academic Başkent, which was founded in the charge of the Founder of our University and the President of the Executive Supreme Board Prof. Dr. Mehmet Haberal on October 29, 2003, is operating under the State Conservatory of Başkent University. As well as periodic concerts given in Başkent University Bajıncı campus, our orchestra that performs numerous concert tours in the cities of Turkey and abroad includes a wide range of musical works from Baroque period to contemporary music. Thus far, a lot of soloists and conductors such as Gürer Aykal, Robert A. Hamwee, Giuseppe Romeo, Erik Lundberg, Gülsin Onay, Ahmet Kanneci, Cihat Askin, Han- die Dalkılıç, Hakan Aysev, Serguei Markarov, Çağatay Akyol, Aykut Dursun, Emre Elivar, Graham Nicholson, Rex Richardson, Burak Tüzün, Gerassimos Loannidis, Matthais Kam- ps, Martin Berkofský, Aneleen Lenaerts, Benyamin Sönmez took place in the concerts of the orchestra.

Having Ertuğ Korkmaz as the music director and permanent conductor and Lütfü Erol as the art director, the majority of the artists in Orchestra Academic Başkent conduct their academic studies at Başkent University and other universities. Orchestra Academic Başkent, having the first and the single chamber orchestra consisting of the artists who are on the permanent staff, was invited to the St.-Petersburg Piano Festival and performed the opening concert of this festival, which was organized within the scope of the 60th anniversary of the founding of UNESCO. The Orchestra Academic Başkent has also done a special performance over the past few years and performed live the music of the last version of the famous version of Sergei Eisenstein’s Battleship Potemkin (Berlin Version) simultaneously with film screening for the 2nd time at the 11th European Films Festival in the world after the Frankfurt Philharmonic Orchestra and got a great acclaim.

FACULTY OF DENTISTRY

Dentistry is a profession that keeps human health in the forefront as well as keeping art, science and technology together. The Faculty of Dentistry is an institution that offers contemporary education and training, conducts scientific research, educates qualified dentists and researchers, and provides health services at an individual and societal level. Since the foundation of Başkent University Faculty of Dentistry in 2000, as stated by the Founder of the University and the President of the Executive Supreme Board Prof. Dr. Mehmet Haberal, the aim of our faculty is; to raise up the level of dentistry education in our country to those of developed countries in the light of new schools, systems and technological developments. Since the foundation of Başkent University Faculty of Dentistry in 2000, as stated by the Founder of the University and the President of the Executive Supreme Board Prof. Dr. Mehmet Haberal, the aim of our faculty is; to raise up the level of dentistry education in our country to those of developed countries in the light of new schools, systems and technological developments. Our aim is to train dentists who are attached to the principles of Atatürk, equipped with the latest theoretical knowledge, who hold human health in the foreground, who have high manual dexterity, who make the least mistakes in diagnosis and treatment, sensitive to scientific developments and who give the best service regarding oral and dental health. In addition to educating undergraduate students, we also aim to train doctoral students and faculty members, to conduct scientific researches, to provide the most healthful treatment services based on modern and advanced technology, to improve oral and dental health in the society and to spread preventive dentistry in our country.

Dental services are also provided outside Ankara; in the Oral and Dental Health units of Başkent University’s Adana, İstanbul, Alanya, Konya Practice and Research Centers by prioritizing the principle of serving patients in modern and contemporary conditions. Among the faculties of dentistry in our country, internship opportunities are given to trainee students in Başkent University centers in different cities for the first time and diversity in education and students' adaptation to different working conditions are provided. Our faculty aims to train well-equipped and pioneer individuals to pursue universal standards and follow the latest technology, which is one of the basic principles of the university.

In line with the contemporary developments in dental education, we have been implementing a student-centered, problem-based, horizontal-vertical integrated education system since the foundation of our faculty. In this system, the base is student’s learning the ways of accessing information and learning itself. The medium of instruction at our university is Turkish; but the emphasis is on intensive English education with academic and vocational English classes. Students who are successful according to the results of the English Language Proficiency Exam start their first year of education, while those who fail are trained in one year at English Preparatory School. The first three years of five-year dentistry education are given at the Faculty of Dentistry of Başkent University Bağlıca Campus. In this three-year period theoretical lectures and practical applications are carried out. In pre-clinical practice in student education, units that mimic the patient and dental unit, called phantoms, are used so that ergonomic working conditions and compliance with the clinic are achieved.

In the second semester of the third year, the students participate in clinical practices in the Bahçeşehir Faculty of Dentistry as a half-day clinical observer per week.

The last two years of training are based on clinical studies. Oral and Maxillofacial Surgery, Restorative Dental Treatment and Endodontics, Oral and Maxillofacial Radiology, Orthodontics, Pedodontics, Periodontology and Prosthodontics Departments provide clinical training alternately to internship groups.

FACULTY OF EDUCATION

It is possible for our country to achieve great goals in science, art and service in the 21st century with the vision of education. With this act in mind, the Founder, Founder President of the University and the President of the Executive Supreme Board Prof. Dr. Mehmet Haberal founded the first Faculty of Education among foundation universities in Başkent University and the faculty started education in the 2000-2001 academic year.

Our faculty consists of five departments and six main branches. Early Childhood Education Program and Primary Education Program under the Department of Elementary Education, Mathematics Education Program under Department of Science and Mathematics Education, English Language Education Program in the Department of Foreign Language Education, Turkish Language Education Program in the department of Turkish and Social Sciences Education Department, Guidance and Psychological Counseling Program in the department of Educational Sciences Department. Our faculty also includes postgraduate programs and various certificate programs. In the 2013-2014 academic year, moving to our new fully equipped new building and continuing its education, our faculty has reached the goals set with the teachers educated, knowledge produced for educational purposes, social responsibility projects, original solutions produced for the problems of the educational institutions in its 18th year. It continues to lead the way by continuously renewing and developing itself with the knowledge, skills and attitude-based approaches required by the 21st century. Our basic approach; in the complementary structure of education, in the way that the great leader Atatürk shows, is to form the educational system that will develop the culture of life, raise awareness, bring our society with its cultural accumulations, carry them to universal values and open the doors of original inventions. In this regard, our faculty is engaged in scientific activities, organizations and projects at national and international level in order to achieve excellence in education; following innovations; conducts research continuously and applies the gains to our students, reflects our gathering and institutions; evaluates the results and uses them for institutional development. We have fully equipped Instructional Technologies Application and Research Laboratory as well as computer laboratories, technology classes, science and foreign language laboratories actively used by our students in all subjects, painting, music and drama workshops to provide the integration of technology, to improve distance and e-learning practices. Guidance and Psychological Counseling Department has also rooms and mirrored-rooms where our students can conducts individual and collective interviews with our counselors so that they can develop their knowledge and skills in their professional field.

FACULTY OF SCIENCE AND LETTERS

Our faculty, which was founded in 1994 by the Founder, Founder President of the University and the President of the Executive Supreme Board Prof. Dr. Mehmet Haberal, continues education and training in four departments: American Culture and Literature, Psychology, Sociology and Turkish Language and Literature. Efforts to establish the Department of Molecular Biology and Genetics still continue. Our departments’ curriculum consists of compulsory and elective courses that are prepared taking into consideration the criteria stipulated by international accreditation institutions and are the programs are contemporary and dynamic. Based on a student-centered education-teaching approach in our faculty; it is aimed to educate self-confident individuals who are equipped with the knowledge and skills to think, inquire, generate ideas, exchange information, establish relations with their environment, who are prone to teamwork and use all information technologies effectively. The academic environment, contemporary background and equipment required to achieve the goals we have determined in our faculty have been established and we are working our academic and administrative staff who are loaded with knowledge and love. The participation of our academic staff in scientific meetings is intensely supported by our university. Within the framework of the Erasmus academic staff, staff and student mobility programs, all of our academic and administrative staff and our students are provided with the opportunity to exchange information for a period of time at the prestigious universities in Europe. Our students have the opportunity to meet and work with our directors and instructors in a warm family environment, every hour of the day about any problems they experience. Our students are encouraged to participate in scientific meetings by the support of our university.

Our graduates as being loyal to Atatürk’s principles, conscious individuals who know the rights and responsibilities of citizenship, creating a sense of responsibility and awareness towards the people and the country in which they live and the responsibility and awareness to protect and develop the material, spiritual and cultural values that society and the country possess, work at significant positions to serve the country.

FACULTY OF FINE ARTS, DESIGN AND ARCHITECTURE
Faculty of Fine Arts, Design and Architecture, founded in 2003-2004 academic year in the body of Başkent University got into action as an indicator of the importance that the Founder, Founder President of the University and the President of the Executive Supreme Board Prof. Dr. Mehmet Haberal gives to culture and art. Among the aims of the Faculty of Fine Arts, Design and Architecture is to bring a new point of view to the cultural and artistic movements in Ankara the capital and to provide original discoveries in art design fields. The main objective of our faculty is to move from the following words that our great leader Atatürk stated, “Culture is the foundation of the Republic of Turkey”. Our basic philosophy; to rely on the national resources nourished by art and to integrate our cultural heritage with contemporary and universal dimensions, to do research on new quests and to present the enriched designs born of technology and art to the service of our nation and the world. There are five departments in our faculty; Department of Visual Arts and Design, Department of Interior Architecture and Environmental Design, Department of Fashion and Textile Design, Department of Architecture and Department of Cartoon-Animation. Our faculty, which has knowledgeable faculty members, adopts a student-centered teaching style, has a multiple-choice course system, so students have the freedom to choose the courses they desire and love so that they can put the theory into practice by experimentation. There are rich educational opportunities in our faculty; fully equipped multimedia studios, computer laboratories, sculpture, printing and photography studios for practice and two design studios. Our faculty having 8 design studios has 2 galleries in action. While one of the galleries is used to constantly display student work, our second and largest gallery has been allocated for exhibitions by national and international art schools and artists. One of the most important concepts of today’s education and training environments is interdisciplinary education, which is the basic philosophy of our faculty, because only studies conducted within the field do not go beyond vocational education. However, in the interdisciplinary education, transferring different fields to the art education is considered as the basic element of the creative human type, and the contents of our faculty are handled in line with this philosophy. Two international symposiums have been held in the last 5 years and many local and foreign speakers participated in our events. Başkent University, positioned among the leading universities of our country, is glad to serve our country and its people depending on the basic values of the Republic of Turkey, as indomitable guardian of Atatürk’s principles and reforms.

FACULTY OF LAW
The Faculty of Law of Başkent University began education and training in the academic year 1997-1998. Although there is a great demand for faculties of law in our country, the quota of our faculties is limited in order to provide an advanced law education. Our faculty, which has sufficient number of academic staff at the highest level, aims to provide a qualified and sufficient law education. For this reason, “getting students from the first 150,000 students” brought by the Higher Education Council is drawn up to further raise the standard and is preferred among the first 70,000 students from the Undergraduate Placement Examination. The medium of instruction at our faculty is Turkish. The Founder, Founder President of the University and the President of the Executive Supreme Board Prof. Dr. Mehmet Haberal says “Our language is Turkish language”. Because we know that a person can learn in the best way and express his / her self in the mother tongue. However, since the law must reach the international dimension and a lawyer must know a foreign language that is internationally well known, there is also the English Preparatory Program at our University for those who do not know the foreign language well enough. The foreign language education given at the English Preparatory Program continues at the advanced level during the four-year education period. In addition, various law courses are taught in English so that the foreign language can be used in the professional field.

In order to become a good lawyer, it is necessary to have a broad general culture and the ability to use computers in addition to foreign language. For this purpose, especially in the first years of our education, these courses are given importance and our students are equipped with the subjects which are required by the contemporary world.

In addition to the knowledge required for modern law education and training and the law knowledge, there is also a need for areas such as economy, business, accounting and international trade. This knowledge is given to the student’s by elective courses. The courtroom, which was founded at our faculty for the first time among the faculties of Law, allows the students to reflect on the theoretical knowledge they have learned.

With all these opportunities, we are trying to raise the lawyers who have at least one foreign language, who have a broad general culture and ability to use computers, are qualified enough in the original and current fields that can be used when necessary and have acquired law knowledge at the highest level. How happy we and you our beloved students are to be a part of Başkent family.

Our faculty is one of the first faculties of Başkent University. Admitting the first students in Business Administration and Tourism Management undergraduate programs in 1995, our faculty attained the capacity to start Economics, Political Science and International Relations, Technology and Knowledge Management and Business Administration undergraduate programs. Our faculty departments also run several postgraduate programs. The Faculty of Economics and Administrative Sciences has grown and developed over the last twenty years with its quality academic staff and graduates who contribute to the human resources of our country. Among our graduates are faculty members, entrepreneurs, public officials, media staff and senior managers. Adopting the principle of “7 days and 24 hours” as the main focus of the culture of Baskent University, our faculty aims to teach the students scientific knowledge, techniques and practices related to their fields and provides them with the opportunity to participate in the scientific knowledge production of our country with its competent faculty members and research facilities. Since the administrative and academic staff of our faculty are committed to being student-centered, our students are situated in a warm and supportive environment where the Gates of academic interaction is open to them. Since our students’ contribution to national and international academic collaborations is important, we support them at the highest level to benefit from such programs as ERASMUS, FARABI and MEVLANA. In addition, students are also encouraged to take the advantage of the opportunities offered by the double major and minor diploma programs offered to them. Our faculty supports graduates who want to go on with their graduate and doctorate studies at our university after their undergraduate studies and carry out the trainings with related departments. Some of our graduates are already in our academic staff; being a graduate of Başkent University and our faculty is the reason for this preference. Our faculty, which adopts serving the society and science as the cause of existence, being conscious of its responsibilities to contribute to the scientific knowledge and the human sources our country needs, is acting with its all staff in line with what these responsibilities require and will continue to act.

FACULTY OF COMMUNICATION

Prof. Dr. Mehmet HABERAL

When Planting Trees on the Campus
Founded in 1997, the Faculty of Communication has three departments: “Public Relations and Publicity,” “Communication Design” and “Radio Television and Cinema.” The Faculty of Communication, which continues its academic activities effectively in line with the foundation principles, aims and targets of Başkent University, aims to raise individuals who are “researching, thinking, producing initiative, professionalism in the frame of professional standards and ethical rules through the sense of responsibility, as well as being equipped with knowledge and skills, cultural awareness and the necessary background.”

Theoretical lectures given by experienced faculty members, who have created important projects through their academic work, are transformed into “Communication Design Workshop”, “Radio Television and Cinema Workshop” and computer labs to provide qualified education to the students under the guidance of the specialist academic staff.

In the faculty of Communication, which believes in the benefits of education in mother tongue and also aims to have international standards at the same time, 30% of courses are given in English.

In this regard, the elective course options designed according to Bologna principles provide advantages to all students, especially those who participate in international exchange programs such as Erasmus.

Students who meet the requirements may participate in minor and double major programs if they desire. Our graduates who graduated from our faculty, where more than five hundred students take education, may pursue academic careers as well as working in all public institutions and in various fields of the private sector, especially in the media sector, advertising and public relations companies.

As a matter of fact, the Faculty of Communication offers contributions to meet the needs of our country’s qualified academic staff with “Public Relations and Publicity” and “Radio Television and Cinema” graduate programs. While the “104.2 Radio Başkent program, which is continuing its activities under the direction of the Faculty of Communication, meet the students with their audience, “Channel B opens internship gates to students who wish to be a intern in the Channel. Students who can organize different activities with professional advisors in professional communities can also take care of career steps confidently as a representative of the slogan of “We Are Future” by taking advantage of other social, cultural and sports opportunities that Başkent University has.

The primary goal of the education activities of the Engineering Faculty is to graduate our students as productive, analytic, and inductive individuals. We strive for educating our students as creative and innovative engineers, who are capable of embracing the place and importance of engineering in human life, environment, and technology with complete respect to human mind. Furthermore, our programs focus on developing characters with the motivation and ability to question, investigate, and research. Based on the fundamental principle of Başkent University, “Science accumulates here and disseminates from here,” our objective is to contribute to the elevation of the technological, socio-economical, and cultural level of the society, to improve human health, and to spread social services by means of training-education, research, development, and scientific dissemination activities.

Education at the Faculty started with the Department of Electrical and Electronics Engineering in the 1996-1997 academic year and kept expanding with the opening of Computer Engineering and Industrial Engineering Departments in 1998-99 academic years, respectively. Our Faculty, which follows the development on national principles, launched Turkey’s first Biomedical Engineering Department in the 2000-2001 academic year, with the foresighted proposal of Prof. Dr. Mehmet Haberal, the Founder, President of the University and the President of the Executive Supreme Board of Başkent University. Department in the 2000-2001 academic year, with the foresighted proposal of Prof. Dr. Mehmet Haberal, the Founder, President of the University and the President of the Executive Supreme Board of Başkent University. Department in the 2000-2001 academic year, with the foresighted proposal of Prof. Dr. Mehmet Haberal, the Founder, President of the University and the President of the Executive Supreme Board of Başkent University. Department in the 2000-2001 academic year, with the foresighted proposal of Prof. Dr. Mehmet Haberal, the Founder, President of the University and the President of the Executive Supreme Board of Başkent University.

As a requirement of the Başkent University policy of steady improvement, academic programs of its departments are updated according to the criteria of the national and international accreditation boards. Our Undergraduate Industrial Engineering and Mechanical Engineering degree programs were accredited on May 2013; MÜDEK accreditation and the EUR-ACE label. Because MÜDEK is recognized by Washington Records, our graduates are also entitled to take exams on the field in the USA. The accreditation of Departments of Industrial Engineering and Mechanical Engineering re-evaluated in 2015 has been extended until September 30, 2018. Our other departments, Biomedical Engineering, Computer Engineering and Electrical and Electronics Engineering have completed the preparations for MÜDEK Accreditation and will apply for the academic year 2016-2017. Each curriculum includes basic sciences, general engineering and vocational courses, as well as courses in social sciences and fine arts.

Theoretical engineering courses are supported with applications and experiments, which are interactively carried out in small-groups in modern laboratories, under the supervision of experienced teaching staff. Teaching staff of the Faculty carry out both theoretical and research projects with national and international institutions, in particular cooperation with the Scientific and Technological Research Council of Turkey (TÜBİTAK) and the Turkish Ministry of Industry, and they pay due importance to university-industry relations. This experience and the know-how pool are shared with our students in the educational activities in order to prepare them to real-life problems.

The entire staff of our Faculty pays utmost care to student advisory and strives for supporting education and social life of every student, “English Preparatory” principle of Başkent University applies to all programs of the faculty in the undergraduate curricula. Each student graduates with sufficient knowledge of English in his/her field of profession. In order to relate theory with practice our students have to fulfill two summer internships for 40 workdays after the 4th and 6th semesters. In their senior year, every student in their 7th and 8th semesters carries out a senior graduation Project under the supervision of a dedicated faculty staff. Our students during the course of their projects perform their research particularly through a concerted full exposure to industry-university collaboration, usually on a leading-edge technology platform and knowledge base, which gets them prepared to the real work environment. Some of the senior graduation projects are realized with international collaboration among universities and are supported through grants from TÜBİTAK. Completed projects are presented to the industry at an exhibition at the end of the semester. Başkent University has launched another prismatic, namely to financially support senior graduate projects at national and international meetings. In the past, participating student groups have won first and second places, success awards and represented our university and country successfully.

Our students can benefit from the Erasmus program, which enables the exchange of students and academic staff among the universities of European Union member countries, during regular or summer semesters, and they can gain foreign experience during their university education. In addition, Master of Science Programs in Computer Engineering, Biomedical Engineering, Electrical and Electronics Engineering, Industrial Engineering, Quality Engineering, Mechanical Engineering, Energy Engineering, and Doctorate Programs in Electric-Electronics Engineering, Computer Engineering, Biomedical Engineering, Industrial Engineering and Mechanical Engineering are carried out by the Institute of Science and Engineering of Başkent to gain graduate degrees. Engineering Faculty of Başkent University continues to educate its students to serve important roles in the development of our country as engineers who generate rather than transferring technology, have over 1500 graduates who have established their own businesses as entrepreneurs and are highly recognized in public and private sectors.

Graduation Ceremony
FACULTY OF HEALTH SCIENCES

Prof. Dr. Mehmet HABERAL
Founder and Founder President of Başkent University
President of the Executive Supreme Board
FACULTY OF HEALTH SCIENCES

Baskent University Faculty of Health Sciences, is the first school established by this name in Turkey, it has set an example to Turkey. Nutrition and Dietetics, Physiotherapy and Rehabilitation, Nursing, Audiology, Health Care Management, Social Work and Sports Sciences departments are continuing education, teaching and research activities in cooperation. Faculty of Health Sciences has taken its mission as adding years to life and health to those years “ on the basis of the Founder of the University and President of the Executive Supreme Board of Prof. Dr. Mehmet Haberal’s philosophy of “living is beautiful, to make somebody live is infinite”. In line with this mission, we aim to raise graduates who are going to understand the multidimensionality of health concepts and healthy life-quality relation, who will easily adapt to the innovations brought by contemporary science, have knowledge and skills at international level and will make a difference in their fields. To this end, we are honored to serve our students and our country with our qualified and successful academic staff, modern laboratory facilities and a perspective that keeps community health in the forefront. We also contribute to scientific developments with our scientific research and publications and continue to represent our country with our international collaborations.

FACULTY OF MEDICINE

Baskent University, founded by Prof. Dr. Mehmet Haberal in 1993, our Faculty of Medicine also started education as the first foundation Medical Faculty of our country in the same year.

Instead of increasing the number of physicians, our faculty aims to educate physicians who are successful at the international level, who are pioneers in health care and education, who have the “scientific personality”, and who have the awareness of health problems of our society and the ability to educate themselves continuously.

Contemporary medical education methods enable active participation of the students in the education, students learn the ways of accessing the information and our faculty members are able to transfer their experiences with the “master-apprentice” method. Our medium of instruction is Turkish, but the training is supported by intensive vocational English courses. Seeing many and various patients is an indispensable part of training. The number of patients examined and treated in the Practice and Research Centers in different cities is well above the numbers that a faculty in our country and abroad can reach. Our faculty provides all kinds of support for our students to participate in scientific meetings in the country or abroad; many of our students go on internship to various parts of the world and acquire new horizons.

Our unique and self-sustaining student-centered education program, our exemplary practices such as the Study Groups, our TUS (Examination for specialty in medicine) achievements, our dynamic faculty staff, our contemporary and complete infrastructure opportunities and our scientific publications per academic staff increase the international reputation and prestige of our university.

In 2011, the Faculty of Medicine was accredited by the National Medical Education Accreditation Board (UTEAK - TEPDA) as the youngest and only foundation medical faculty in medical education. Our faculty has become recognized by the World Federation of Medical Education (WFME) in this way, and after 2018, it has the privilege of being able to make its graduates continue their education in the United States as the benefit that can only be had by the graduates of the faculties that are the members of the Federation. We expect our youth who want to work to raise the awareness and level of health of our society and who want to be a “good doctor” who take the duty of serving the people as the biggest goal and works for a healthier world after us.

Why Faculty of Medicine at Başkent University?

- The most experienced and the first Foundation University School of Medicine in Turkey
- The medical education model continuously developed in response to new developments, the most recent one being accredited in 2011 by the TEpdAD / UTEAK that evaluates the quality and standards of the Medical Education independently, the membership of the World Medical Education Federation (WFME) through TEpdAD / UTEAK and in this way the opportunity to study and work in the United States for graduates
- Having the Experimental Animal Production and Research Center and Multidisciplinary Laboratories at international level
- The opportunity to provide the students with skills / competence on the models as a requirement of medicine through the Modular and Multidisciplinary Laboratories
- Internet access for every student
- The number and diversity of patients which is the basis of clinical medical education in the Application and Research Centers in Ankara, Adana, Konya, Alanya, Istanbul and İzmir where 2,500,000 patients are examined annually and 110,000 hospital patients and 55,000 patients are treated by surgery

Bağcık Campus and Education Hospitals

Medical education starts at Basic Medical Sciences Department in Ankara Bağcık Campus and the last three years of clinical internships are continuing in Ankara Hospital in Bahçelevler. During the internship period, there are short rotations in Adana, Alanya, Istanbul and Konya Hospitals.

Turkish as the medium of instruction and the opportunity to learn advanced English

Like all national values, the national language is the main factor that makes a nation, and the medium of instruction is Turkish at all faculties in Başkent University as well as in the Faculty of Medicine. Besides this, in addition to the English Preparatory Class, “Vocational English Education” is given at an advanced level during the medical education period, in recognition of the importance of foreign languages in the globalizing World.

Education, Special Study Groups

Laboratory practices supported by the Experimental Animals Production Center where mice from S. Albino, BALB / c race, rats from W. Albino, Dawley, Lewis race, Syrian hamsters, G. Pig (guinea pig), rabbits from the races of N. ZelanD, B. Vienna, domesticated pig are raised. Each student is provided with a microscope and other materials required for experiments so as to make the learning permanent at a time when molecular medicine leaves its mark on the age. Through the special “Working Groups Program” formed by the preferences of the students in the first three years, medical students are taught the methodology of medical research and ways of accessing information in the first years of their education and they learn how they can discuss and present their research in a scientific environment in an effective way.

The Number of Patients and Patient Diversity in Clinical Internships

This is a 3-year active process that is not similar to any other tertiary medical education taking place in hospital. In clinic internships, active education is measured in hours that the student can spend with the instructor. Başkent University’s Hospitals in Ankara, Adana, Konya, Alanya, Istanbul and İzmir provide a unique opportunity in the world of clinical education of a total of 300 students with approximately 15 million patients with a total bed capacity of over 1700 per year.

Medicosocial Services

The Health Center on the Bağcık Campus provides services to all students 7 days and 24 hours and the first examinations and treatment of students and staff are free of charge. Patients who require further examination and treatment are referred to our University Hospital in Ankara.

How to go to Başkent University Faculty of Medicine?

Visit to the Bağcık Campus

At the 20th kilometer of Ankara-Eskisehir highway, the Bağcık Campus of Başkent University is seen on the right. The Faculty of Medicine Basic Sciences Building is located in this campus. It is sufficient to apply for the attendant at the entrance of the Faculty of Medicine between 09.00-17.00 on every day of week. Those who do not prefer to reach with their own vehicles can be accommodated by services that move in front of the Başkent Hospital in Bahçelevler.

Visit to the Bağcık Campus

It is possible to visit our hospital in Ankara with the application of Hospital Chief Physician’s Office every day of week.

Visit to Başkent Adana, Konya, Alanya, Istanbul, İzmir Hospitals

It will suffice to apply to the Chief Physician’s Office of the Hospitals every day of the week to see the Başkent University Hospitals located in these cities.

The “Distinguished Fellowship” award, which means the highest level of honorary membership by the England Royal Society Medicine, one of the world’s most important and respected medical organizations, was given to Prof. Dr. Mehmet Haberal.
The goal of the Faculty of Commercial Sciences, Baskent University, is to raise creative and solution oriented individuals with entrepreneurial spirit who can comprehend practices, necessities, and novelties in the targeted economic sectors. Educational programs or the departments in the Faculty of Commercial Sciences are all 4 year undergraduate programs. The academic content of the programs is prepared according to the expectations of the targeted economic sectors. The educational programs of the departments of Banking, Accounting and Financial Management, Insurance and Risk Management, International Trade, and Management and Information Systems are conducted in close cooperation and co-ordination by all the departments. Having completed successfully a common program module for two academic years, all students follow their own core program modules. Meanwhile, the students in the Department of Tourism and Hotel Management also take some essential courses from the common module which is spread over the academic years. All educational programs are also supported by the summer internship and on-the-job training programs which are compulsory and carried out by the cooperation of both the university and related economic sectors. Learning foreign languages and using computers as well as computer based instructional technologies, which have important roles in raising the personnel of the information age, are the core components of all programs. The instruction in the Faculty of Commercial Sciences is in Turkish. However, every student has to be able to follow any course module that is thought in English as well as to use instructional sources in English if necessary. Therefore, students are required to pass an English proficiency exam. Otherwise they have to complete a one year English preparatory program. Additionally, in order to use English effectively in their professional life, students are required to pass the compulsory English Language courses that take place in the four-year educational programs.

Prof. Dr. Doğan Yaşar AYHAN
Dean

“According to the decree of Higher Education Council dated July 04, 2017, B.31.0.04/01/2759 numbered article, “All graduates of Faculty of Commercial Sciences can apply for job positions and exams of both private and public institutions such as Economics and Administrative Sciences graduates.”

ADANA VOCATIONAL SCHOOL OF HEALTH SCIENCES

Adana Vocational School of Health Sciences founded by Prof. Dr. Mehmet Haberal in order to realize the purpose of spreading health services throughout the country has completed the eighth year in the field of education and training, and it presents how much it can achieve through the quality of service, the value it gives to its students and the energy it has invested in education.

Adana Vocational School of Health Sciences having modern school infrastructure, three different hospital complexes in our university and Adana Application and Research Center through its newly opened clinic tries to make you the best in your profession with its strong academic staff in the field of education, hospital units equipped with advanced technology in the field of application, with its management staff who carefully evaluate the problems and requests of students and value the students.

Another important issue that we need to express on behalf of our vocational school is our encouragement to help our academic and management staff gain vocational training as well as social responsibilities, task discipline and communication success and our effort to raise qualified individuals.

KONYA VOCATIONAL SCHOOL OF HEALTH SCIENCES

A country’s economic, social and cultural development depends on its work force which is directed and grown in accordance with the requirements of the service.

The lack of trained personnel in the field of health, in our country, is growing and the importance of vocational education, is increasing and intermediate manpower is needed. To train educated and trained manpower in our school is a very important service for our country.

The most important source is manpower, and the most important investment is education. With this awareness in our country, the international harmonization in the field of health, the industry’s expectations while maintaining standards of professional competence and national guards, in the field of knowledge, skills, the ability to practice, use of initiative, authority and responsibilities, knowledge, which can create a solution, working successfully in teams are all important elements. Students graduating from our school after a two-year technician training can find jobs both in public and private sectors in health without difficulty.

I wish you progress in your professional life through the right choices, and I wish you a lot of success.

VOCATIONAL SCHOOL OF SOCIAL SCIENCES
VOCATIONAL SCHOOL OF SOCIAL SCIENCES

Baskent University Vocational School of Social Sciences founded in 1995 provides Associate Degree education in Office Management and Executive Assistance, Tourism and Hotel Management, Tourism and Travel Services, Accounting and Tax Applications, Radio and Television Programming, Photography and Camera Operation, Cooking, Justice and Child Development programs. Vocational school aims to educate qualified, conscious professional members who love the nation and the country, know the world, think, produce and follow innovations. Conducting theoretical and practical courses together, implementing of compulsory summer internship consisting of 30 working days adhering to learning by doing principle and training students who master at least one foreign language are common features of our education and training programs prepared through a contemporary understanding. Our programs are prepared within the scope of the Bologna Process. Our vocational school is a member of Leonardo da Vinci Program thanks to the university’s Erasmus Certificate. Scholarships are given to our students at rates ranging from 25% to 100% which they can benefit during their education on the condition of being “successful” in the initial registration. Medium of instruction is Turkish, and one-year intensive English program (English Preparatory School) is optional. Academic and vocational English courses are included throughout the associate degree program. Graduate students are able to continue their undergraduate education at foundation and public universities based on the results of the vertical transition examination (DGS).

KAZAN VOCATIONAL SCHOOL
KAZAN VOCATIONAL SCHOOL

Baskent University which was established in 2007 provides associate degree education in Business Administration, Foreign Trade, Mechatronics and Logistics programs in Kazan Vocational School. Vocational school aims to educate qualified, conscious professional individuals who love the nation and the country, know the world, think, produce and follow innovations. Conducting theoretical and practical courses together, implementing compulsory summer internship consisting of 30 working days adhering to learning by doing principle and training students who master at least one foreign language are common features of our education and training programs prepared through a contemporary understanding. As Baskent University, we are proud to announce that the European Commission of Education, Audiovisual and Culture Executive Agency has awarded the University’s Diploma Supplement, ECTS Labels and Erasmus University Charter under the Erasmus + Program. Our vocational school is a member of Leonardo da Vinci Program thanks to the university’s Erasmus Certificate. Scholarships are given to our students at rates ranging from 50% to 100% which they can benefit during their education on the condition of being “successful” in the initial registration. Medium of instruction is Turkish, and one-year intensive English program (English Preparatory School) is optional. Academic and vocational English courses are included throughout the associate degree program. Graduate students are able to continue their undergraduate education at foundation and public universities based on the results of the vertical transition examination (DGS).

VOCATIONAL SCHOOL OF TECHNICAL SCIENCES

The aim of Vocational School of Technical Sciences is to train creative and leader individuals who can follow technological developments and have technical knowledge and skills in the field. While students gain professional skills in their fields along with basic electronic and computer knowledge, various applications are conducted to develop analytical thinking and problem-solving skills. The research process is supported to increase the desire of the learner to learn and cooperate in the acquisition of knowledge and skills, and provides an intellectual and behavioral background that contributes to the development of awareness of responsibility through professional ethics, environmental and social perspectives.

“Biomedical Device Technology” program is carried out in our vocational school. While the basic technical subjects are taught in the first year of our two-year education, the specific area courses of all related programs are covered in the second year courses. Many courses are practical, and the laboratories where the applications are made are equipped with the modern machinery and equipment required for the students to gain the experimental knowledge and skills they will need to solve the practical problems they encounter in their professional work environments. The vocational school contributes to meeting the need of trained technical staff in the fields of industry and service sector of our country by constantly improving their training programs in response to expectations in business areas and in the light of changes in the world. Graduates of the programs are awarded “Associate Degree” diploma.

SCHOOL OF FOREIGN LANGUAGES
SCHOOL OF FOREIGN LANGUAGES

Baskent University School of Foreign Languages which fulfills the requirements of education defined as “Medium of instruction is Turkish, but English is an asset” by the Founder, Founder President of the University and the President of the Executive Supreme Board Prof. Dr. Mehmet Habeşal aims to equip graduates of all academic and vocational programs of the university with English language skills which will enable them to follow the literature in their fields of study and communicate effectively both in written and spoken English.

One of the main aims of Başkent University is to educate a generation of dynamic and successful researchers and businessmen who can communicate with the world. In order to achieve this aim, although the medium of instruction is Turkish, School of Foreign Languages offers both Academic English Courses and English for Specific Purposes (ESP) courses applicable to all associate and undergraduate degrees in addition to one-year English Preparatory Program.

Newly admitted students to Başkent University attend two-stage English Proficiency Exam prepared and administered by the Test Development Unit at the beginning of the academic year they are enrolled. According to the results of the examinations, students are placed in Intensive English or Vocational English programs appropriate to their levels.

All English courses in undergraduate and associate degree programs of Başkent University are taught with credits. The purpose of these courses is to provide students with reading, writing and oral communication skills depending on the features and needs of the program. While our department English programs are developed, special attention is paid to ensure that each program addresses the group of students intended. Curriculum Development Unit prepares the Curriculum of the School of Foreign Languages to meet a variety of needs especially on a very large area. That is why, it is possible for our students to research, investigate and communicate verbally and in written form according to the branches they graduate.

INSTITUTE OF EUROPEAN UNION AND INTERNATIONAL RELATIONS

Institute of European Union and International Relations aims to perfect learning and produce qualified theses based on original research. The institute operates in three main areas in order to achieve this aim. The first one is to ensure that faculty members who teach or supervise theses in institute programs are scientists who have an effective research agenda and have experience in publishing and teaching. The second is to encourage faculty members who follow recent developments in the field of research to update their course content according to them and to enrich the curriculum content by opening new lectures on these newly developed topics, areas and approaches. By this way, students gain knowledge and ideas about up-to-date scientific developments in the area and gain a scientific basis to refine their research questions if they write a thesis. Third, the Institute takes the student in the center in all its programs, ensures the active participation of the learner, and thus aims to prevent the learner from becoming a passive element to load information. Since the Institute considers teaching process as a “joint venture”, it sees its students as “participatory stakeholders,” and instructors as “guides” to assist in developing intellectual and analytical capacities of learners instead of transferring information. In this respect, it aims to develop students’ knowledge and skills by mutually interacting, sharing and discussing, and ensuring that class conditions are appropriate for this purpose. The teaching process in the institute is designed in such a way that students have access to information, critically evaluate the information they have achieved, blend, make consistent analytical assessments and develop the ability to articulate the results achieved within a causal framework.

In graduate programs under the supervision of the Institute of Educational Sciences, qualified experts and researchers needed by the Turkish Education System and academy are trained by taking adult education principles into consideration. In related graduate programs, students are required to take courses from qualified faculty members and conduct qualified research in order to build identity of researchers who contribute to science and Turkish Education System and to train them on 'education research' in a qualified way. Different methods and techniques are used in the classroom to enable students to relate theoretical knowledge they have learned in class to life and transfer it to life to practice it. For students to understand the theory-practice integrity, case studies are emphasized especially in practice. In addition, brainstorming, discussion, small and large group work, and question and answer methods are used in order to ensure the permanence of case studies. Courses are designed by examining recent studies in the field of education so that our students are able to gain the skills to follow the latest developments in their fields and to transfer scientific method steps into practice by adopting and interdisciplinary and scientific study steps. All lecture notes and presentations are offered to graduate students through MOODLE to benefit from online education opportunities. The Institute of Educational Sciences continues its efforts to contribute and improve the development of the educational field and qualified scientific research by establishing a contemporary learning environment for all stakeholders.

INSTITUTE OF SCIENCE AND ENGINEERING

24 programs are conducted in 10 departments of Institute of Science and Engineering, which are 5 Ph.D. programs, 12 thesis Master's Degrees and non-thesis 7 Master’s Degrees. In addition, the opening of “Defense Technology and Systems Ph.D. Program” and “Information Technologies and Systems Distance Education non-thesis Master’s Degree program” has been approved by the Executive Board of the Higher Education Council, and students will be admitted to these programs during the fall semester of 2018-2019 academic year. 376 students are registered to the Ph.D. and thesis/non-thesis Master’s programs of Institute of Science and Engineering. Of the 94 students enrolled in 5 doctoral programs, 34 students have successfully reached at the thesis stage after doctoral proficiency exam. 119 of our 218 students enrolled in thesis master’s programs came to the thesis stage and enrolled in their master’s thesis. Many scholarly publications published in national and international journals have been produced by Master’s and Ph.D. students registered in their thesis. Content of the courses in the programs carried out in the institute are updated by our instructors every year in terms of other measurement and evaluation methods such as supplementary materials, homework, projects and presentations materials used outside the class and exams in accordance with the knowledge and skills that we want our students to acquire. In addition, our students develop their ability to read, understand, report and present scientific publications by examining advanced research topics or scientific articles. The average number of students per class is around 8. This number enables courses to be presented in one-to-one interaction and communication. Our graduate programs aim to educate our students in scientific and practical subjects by providing basic principles and infrastructure necessary to provide solutions to complex technological problems of modern society. The Institute provides innovative, theoretical and practical ways that can be solutions to the needs of society by cooperating with different fields when necessary.

INSTITUTE OF HEALTH SCIENCES

The institute aims to educate scientists who think free, discuss, research, question, compromise ethical values and provide scientific information for humanity by viewing scientific thinking as a guide in all areas of life with lifelong learning consciousness. In 16 departments of the institute, 13 doctorate programs, 10 thesis master programs and 3 non-thesis master programs are put into practice, and educational programs adopting current approaches are implemented since it is aimed to train graduates who have internalized scientific thinking, have scientific work experience and plan and carry out education programs and research. Master’s degree programs are a concise, dynamic and important part of postgraduate education that contributes to creation of professional workforce that meets social needs. Ph.D. education programs on the other hand include a training process that prepares students for academic life, leads them to search, find and apply knowledge and aims to record, protect, share and disseminate information. A must of doctoral programs is the thesis that students prepare within the frame of freedom of expression and research. It is essential that the thesis work has a unique contribution to science in the universal sense. In parallel with the developments in health sciences and technology, new research studies are planned and made in our institute to contribute to the literature by taking conditions of our country into consideration. Students are encouraged to plan and conduct scientific research during their training. Also, academic advisors and students are asked to conduct their lectures and discussions carefully and meticulously. It is aimed to educate highly qualified graduates who provide scientific knowledge they produce to the humanity, know the importance of lifelong learning and follow developments in the area.

INSTITUTE OF HEALTH SCIENCES
INSTITUTE OF SOCIAL SCIENCES

Beginning education in 1995-1996 academic year, Başkent Institute of Social Sciences aims to provide quality service at universal level and develop continuously by taking changing social, economic and technological conditions in post graduate education into consideration. Institute of Social Sciences contributes to the internationalization of scientific production and its effective diffusion in the society through educational activities carried out by the graduate programs in order to make scientific production and spread in the foreground in national and international arena. The institute is at the forefront in responding to the needs of society in social sciences specialized fields with its graduate programs. Institute of Social Sciences continues education with 27 thesis Master’s degree, 24 non-thesis Master’s degree, 5 distance education program and 5 Ph.D. program in 23 scientific/art programs in the scope of State Conservatory, Faculty of Arts and Science, Fine Arts, Design and Architecture, Economic and Political Sciences Faculty, Faculty of Law, Health Sciences Faculty, Faculty of Communications and Faculty of Trade. The graduate courses are held between 18.30 and 21.00, and the necessary physical conditions are provided for the effective conduct of courses. Content of graduate programs are updated, and relevant updates are included in the information packs on the web page.

INSTITUTE OF TRANSPLANTATION AND GENE SCIENCES

Our faculty members in our institute Prof. Dr. Feride İffet Şahin and Assoc. Dr. Prof. Dr. Özlem Darcansoy offer undergraduate and graduate courses in Turkish and English within the scope of education programs of Faculty of Medicine and the Department of Molecular Biology and Genetics. Both of our faculty members participate in graduate thesis juries and thesis monitoring committees of different faculties in our university and other universities. Laboratory and human resources sharing continues between Faculty of Medicine, Department of Medical Genetics and Transplantation and Gene Sciences within the scope of Master's Degree Program in Medical Genetics which was opened within Başkent University Institute of Health Sciences and accepted its first students in 2015-2016 spring semester. Seminar programs are organized within the scope of master's program in the Department of Medical Genetics. In these programs, our faculty members Prof. Dr. Feride İffet Şahin and Assoc. Prof. Dr. Özlem Darcansoy İşeri and Dr. Seda Tuncay Çağatay working as an expert both present seminars and attend seminars of students. Selin Akad is currently working as a biologist in the institute and pursuing a master’s degree in Medical Genetics Department. Assoc. Prof. Dr. Özlem Darcansoy İşeri visited Department of Molecular Biotechnology and Health Sciences at Torino University between October 24th and October 28th 2016 in the scope 2015/2016 Erasmus Program. As a result of the visit, in addition to personnel exchange agreement between the department and the Institute, an Erasmus Program agreement was made for the exchange of students in Başkent University Medical Genetics Master’s and Molecular Biology and Genetics undergraduate programs.

Health Center

Health Center serves for all students and employees who are at Baskent University through 3 specialists, 1 dentist, 4 nurses, 2 emergency medical technicians, 2 medical secretaries, 1 driver, 3 policlincs, 1 oral and dental health unit, 1 emergency observation room and 1 ambulance service according to framework of principles determined by Health Center and Help Application Principles and Regulations Directive. The examinations and treatment of students and staff in the Health Center and the examinations at Başkent University Hospitals are free of charge. When the first examinations are made at the Health Center and further examination and treatment is required, students and employees are referred to the university hospital. The Health Center is open 24 hours a day, including holidays and official holidays.

Disabled Students Department

In accordance with “Higher Education Institutions Guidance and Coordination Regulations” item 8, Baskent University Disabled Students Unit was formed in 2006. The unit operates under a vice president and is run by an administrative board consisting of the vice president, the director of health, culture and sports, two faculty members of the department of social service and the health services representative. The disabled students currently enrolled have been contacted and their needs have been defined. It has been confirmed that the buildings and the open areas within the campus accommodate their needs. The web page of Disabled Students’ Unit was created under the website of Department of Health, Culture and Sports.

Dormitories

Built in 1996, our dormitories aim to provide our students with accommodation, nutrition, opportunity to study in a healthy, safe and clean environment and to support them to adapt to the conditions of communal living and thus to contribute to their success. Our University Dormitory which consists of 3 Interconnected residence halls has 474 bed capacity with its standard double and single rooms as well as exclusive single and double rooms. The standard rooms are furnished with carpets while the exclusive rooms have wooden floorboard. All rooms have a bathroom with washbasin, toilet and 24-hour hot water. There is a bed, wardrobe, bookcase, desk and chair to study in the standard rooms. The exclusive rooms additionally have a TV set, an armchair and a mini fridge. Each building has telephones on every floor that can be reached when there is an external call announcement. Dormitory buildings and rooms are cleaned daily. Bed sheets which are provided by the dorm administration are changed once every two weeks. All rooms have limitless wi-fi connection. Male and female dormitory staff and security personnel work in 24-hour shifts. There is a Study Hall which is 24-hour available. Dormitories are located on campus, and transportation to city center is provided free of charge by the university shuttle buses. The latest entry times to the dorms are 12 a.m. on weekdays and 1.30 a.m. on Friday, Saturday and official holidays respectively. Within the dormitory complex, a Sports Center and other facilities available for students’ use. On Campus, there is a post office, a bank office and a variety of dining locations for students to eat and refresh.

Culture Services

Based on the idea that professional and vocational success of individuals who have developed communication power with cultural and social aspects and are able to take responsibility, recognize and introduce themselves will increase, our university aims to help our students to spend their leisure time according to their interests and have a rest and enjoyment habits with new interests. In line with this aim, our department has 41 social and 28 vocational student communities.

Food

There is a fast-food cafeteria, market and photocopy center for 500 students in Preparatory School building. There is a fast-food cafeteria with a capacity of 200 people and a table d’hote cafeteria with a capacity of 200 people in Faculty of Medicine. Transportation
Campus transportation is provided free of charge to our university students and staff from the city center and districts to our campus. There are also all day-long shuttle services between Sıhhıye, Tunus and Campus.

Sports Center
Baskent University Sports Center Coordinator aims to mobilize lives of our students and staff on campus and contribute to them to become active and healthy through supporting physical, mental and social development, introducing them to new sports branches and encouraging them to love sports. In line with these aims, we provide a platform where students and staff of our university can participate and experience excitement and pleasure in the branches they are interested in aiming to provide touristic and recreational activities (competition, interval, fitness contest) in volleyball, basketball, table tennis, football, tennis and chess,). Step-aerobics, plate, tennis, boxing, wing-tsun, escrima and yoga courses contribute to the development of different skills of our students and our staff and to increase their level of physical fitness. Our university teams formed in different branches such as volleyball, basketball, football, table tennis, billiards, tennis, chess, swimming and fencing to strengthen the team and competition spirit of our students and staff participate in competitions held by Turkey University Sports Federation (TÜSF) to represent our university. Gym, dance studio, aerobics studio, grass field, fitness center, carpet field, hiking trail, indoor and outdoor tennis courts located in Bağlıca Campus are open to students and staff on weekdays and weekends.
